

Zirlux[®] Anterior Multi

- 35% Dentin Layer
- 30% Gradational Layer
- 35% Enamel Layer

Multi-Layered Zirconia

with more indications and strength than Lithium Disilicate.

Zirlux[®] Anterior Multi

Zirlux Anterior Multi is the latest development in dental zirconia with fully gradient shading that matches the Incisal, Dentin, and Gingiva of dentition—making it suitable for anterior restorations. The transition of layers mimics the translucency and esthetics of a natural tooth without adding the necessary steps to the workflow.

Zirlux Anterior Multi can be characterized after sintering for cases that require additional customization.

- Axially pressed zirconia followed by cold isostatic pressing using even pressure from every direction creates consistency and ensures the finest quality.
- Each disc is quality checked before final packaging to ensure the material is of the highest quality.
- Compatible with Roland, Amann Girrbach, and industry-leading 98.5mm CAD/CAM Milling Machines.
- Can be temporarily cemented using eugenol-free cement.

Indications:

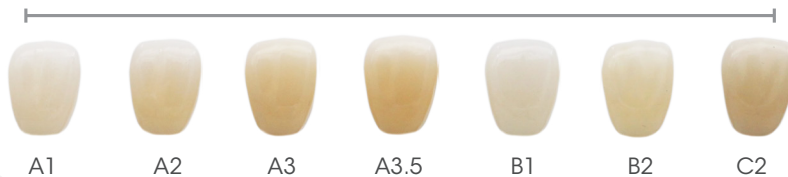

- Anterior Crowns
- Posterior Crowns
- 2-3 Unit Bridges
- Telescopic Crowns
- Veneers

Physical Characteristics

Density before sintering	≥6.0 g/cm ³
CTE after sintering (25-500°C)	(10.5 ± 1.0) x10 ⁻⁶ K ⁻¹
3-point flexural strength after sintering	600MPa
Accelerated aging surface monoclinic phase content	<5%
Chemical solubility after sintering	<100µg/cm ²
Cytotoxicity test	0 level
Radioactivity after sintering	<0.1Bq/g
Sintering Temperature	1430~1470°C (1450°C recommended)

Precise and accurate
results from CAD/CAM
production.

Available in 98.5mm shaded discs.

Natural transition of layers mimic Incisal, Dentin, and Gingiva.

Shade	98.5 x 10 mm	98.5 x 12 mm	98.5 x 14 mm	98.5 x 16 mm	98.5 x 18 mm	98.5 x 20 mm	98.5 x 22 mm	98.5 x 25 mm
